Reality IN Motion

ProPak VR
OPERATOR TRAINING

Know who's ready to operate before you deploy them.

ProPak VR gives every trainee a personal AI instructor, scores performance live, and gives leaders clear proof of competency, so you can deploy operators with confidence.

An AI instructor, anytime

An AI expert instructor is built into every module. Trainees ask for help, guidance or correction by voice, whenever they need it.

Live performance scoring

Every session is scored as it happens, so trainees and instructors see progress right away.

Proof of competency

The LMS records every metric, tracks growth and places each operator at a competency or proficiency level against performance benchmarks.

Readiness checked before deployment

A Competency Check lets your organization confirm skill against those benchmarks and decide who is ready to deploy.

Train beyond the schoolhouse

Operators keep their skills current between formal courses and away from the training site.

Works with what you have

ProPak VR complements the simulators and live-equipment training you already run.

Available now: boom lift, scissor lift and telehandler. **In development:** skid steer. More heavy-equipment training is coming in 2027.

See it in action.

Let's set up a capability brief or live demo for your team. Contact me after I/ITSEC and we'll schedule a time that works for you.
